

Automaton State Diagrams

Simulator-style diagrams for Experiments 12–40
Theory of Computation Laboratory

Experiment 12 — DFA to accept the exact strings "a", "ac", "bac"

Experiment 13 — PDA to accept the string "aabb" ($L = a^n b^n$)

Experiment 14 — PDA to accept strings of the form $a^n b^{2n}$

Experiment 21 — DFA to accept even number of a's

Experiment 22 — DFA to accept odd number of a's

Experiment 23 — DFA to accept strings ending with "ab" (W = aaabab)

Experiment 24 — DFA to accept strings having "ab" as a substring

Experiment 25 — DFA to accept strings starting with a or b

Experiment 28 — DFA to accept strings ending with "ab" (W = abbaabab)

Experiment 29 — DFA to accept the exact strings "bc", "c", "bcaaa"

Experiment 30 — NFA to accept any number of a's

Experiment 31 — PDA to accept the language $a^n b^n$

Experiment 33 — DFA to accept strings having "abc" as a substring

Experiment 34 — DFA to accept even number of c's

Experiment 35 — DFA to accept strings in which a's always appear tripled

Experiment 36 — NFA for strings starting with a and ending with b (check $W = abaab$)

Experiment 37 — NFA for strings starting and ending with different symbols

Experiment 38 — NFA to accept the exact strings "bbc", "c", "bcaaa"

Experiment 39 — DFA to accept strings ending with "abc" (W = abbaababc)

Experiment 40 — NFA to accept any number of b's
